Suppl. Figure 1. Correlations of plasma catestatin levels with systolic blood pressure (A) and diastolic blood pressure (B) in 25 CAD (●) and 31 non-CAD (○) patients. There is lack of systolic and diastolic pressures in only 2 healthy cases. The graphs show no significant correlations (Pearson's correlation coefficient).
Suppl. Figure 2. Changes in systolic and diastolic blood pressure with catestatin administration in ApoE<sup>−/−</sup> mice. Systolic and diastolic blood pressures were measured in 3 mice in triplicate before and after catestatin administration. The graph shows no significant changes (paired Student’s t-test).
