Supplementary Fig. S1 Area under receiver operating characteristic (ROC) curve for 30-day all-cause mortality.

Supplementary Fig. S2 The inclusion of estimated glomerular filtration rate (eGFR > 60 mL/min/1.73 m²) assessment on admission into the 30-day prognostic model based on the European guidelines in normotensive patients with sPESI ≥ 1 (intermediate-risk group).
Supplementary Fig. S3 The 30-day survival curves according to estimated glomerular filtration rate (eGFR) and the European Society of Cardiology (ESC) guideline risk group of patients with acute pulmonary embolism.
Supplementary Fig. S4 The inclusion of estimated glomerular filtration rate (eGFR > 60 mL/min/1.73 m² and eGFR > 30 mL/min/1.73 m²) assessment on admission into the 30-day prognostic model based on the European guidelines. Abbreviations: eGFR, estimated glomerular filtration rate; PE, pulmonary embolism; sPESI, simplified Pulmonary Embolism Severity Index.
