Keywords used for e-prescribing incident identification algorithm in the Pharmacy Quality Commitment (PQC) database

The search values listed in were:
  e-Rx
  erx
  e-rx
  e-prescribing
  E prescribing
  e prescribing
e prescribi
e prescribing
Electronic prescribing
electronic prescribing
Electronic order
electronic order
CPOE
electronic prescription
eprescription
e-prescription
EP (This one may be to generic)
eP (This one may be to generic)
Computer prescribing
Computer prescription

After running the query several times, we refined the search terms to reduce false positive hits and false negative hits. A “space” in the search value can represent any value. For example, “e-rx” in the description field would match to “e rx” in the search value list. We did this to find all search terms recommended. This also eliminated false positive hits, such as “The rx was filled on time”.
