Further images of the peranal endoscopic myectomy (PAEM) procedure:

- a: Endoscopic views showing the lesion identified in the lower rectum.
- b: Indigo carmine staining of the lesion.
- c: The procedure was started with the pocket creation method.
- d: The muscle-retracting sign was found at the center of the lesion.
- e: PAEM was commenced.
- f: Myotomy of the inner circular muscle was performed.
- g–i: Dissection was undertaken between the inner circular and outer longitudinal muscles.
- j: The appearance after dissection between the muscles has been completed.
- k: The artificial ulcer left after PAEM.
- l–n: Pathological appearances of the resected specimen.
  - l: Macroscopic appearance from the submucosal side with the accompanying internal circular muscle.
  - m: Macroscopic view from the mucosal side.
  - n: Histology of the resected lesion with the internal circular muscle. The pathological result was: tub 1 with adenoma, specimen size 60 × 60 mm, tumor size 50 × 50 mm, pT1b (sm 1000 µm), ly0 (D2–40), v0 (EVG), budding G1, pHM0, pVM0.
