**Fig. 1S** Docking model of Dp3-Sam or Dp with MEK1. (A) A concept of the binding site of Dp3-Sam (green), Dp (pink), and ATP (blue) docked to MEK1. Red: $\alpha$-helix;
yellow: \(\beta\)-sheet; blue: 3-turn; yellow-green: 4- or 5-turn; and aqua: loop, in upper panel.

The hydrogen bonds formed between amino acid residues of MEK1 and Dp (B) or Dp3-Sam (C).
