**Fig. 1S.** Effects of ATX on normal diet fed mice. Male C57BL/6 mice fed a normal diet and were divided by 2 groups and administered ATX (50 mg/kg) or vehicle for 6-wk. Body weight was measured (A). Serum ALT, AST, TG were measured (B). Frozen tissue was sectioned at 10 µm and stained with H&E (C). Histological images are shown at original magnification (×40; scale bar = 100µm). (a) Vehicle (normal diet); (b) ATX 50 mg/kg ATX + normal diet. Data represents mean ± SD (n = 10).
