Figure 1S. UV spectrum (panel A), mass spectrum (panel B), and PIS analysis (C) of the main peak in the extract.
Figure 2S. Evaluation of inactivation of HSV-2 particles by apigenin (panel A) and luteolin (panel B) at 37°C for 0 or 2 h and at 4°C for 2 h. On y-axis, the infectious titers are expressed as PFU per mL. Error bars represent standard error of the mean for 3 independent experiments.
**Figure 3S.** HSV-2 attachment (panel A) and entry (panel B) assays for apigenin and luteolin. Data are reported as percentage of infection in comparison to the untreated for 3 independent experiments. Bars represent standard error of mean.
Figure 4S. Schematic representation of the extraction procedure adopted for *A. tortuosum* leaves and tubers.
Figure 5S. SRM profiles of luteolin (285→133) (panel A) and apigenin (269→117) (panel B) in the CE of *A. tortuosum* leaves.
