Neurotrauma quiz keys

No.	Question	Key	Reference
1	The MRI appearance of subacute subdural haemorrhage is	a	Anne Osborn/Pg 205
2	DAI tends to occur at all these sites except	d	Anne Osborn/Pg 212
3	The Glasgow Liege scale gives a score to all the following brain stem reflexes except	b	Neurosurgery 16(5):595–601
4	Bone wax was invented by	c	
5	All of the following are true about Post-traumatic epilepsy except	d	Rengachary: 2843
6	The attributes of an ideal cranioplastic material are all except	b	Rengachary: 2784
7	One of the following statements is true regarding post traumatic CSF Rhinorrhoea	d	Rengachary: 2774
8	The following surgical principles apply for the management of a growing skull fracture except	b	Rengachary: 2760
9	A patient of DAI with GCS 7, on ICP monitor and being managed conservatively for intracranial hypertension suddenly developed oliguria and had a cardiac arrest. Arterial blood sample showed severe metabolic acidosis with hyperkalemia. The urine was high coloured. The probable reason could be	c	Sweet/vol 1 Pg 61
10	One of the following measures is used in the management of intracranial hypertension that is refractory to standard treatment	c	
11	The mechanism by which decompressive craniectomy minimizes herniation syndrome is	a	Sweet Pg 71
12	The advantages of fosphenytoin over conventional phenytoin are all except	b	Greenberg 411
13	Which one of the following is a Type 4 frontal skull base fracture according to Escher classification?	a	Pg 115/Sweet
14	The MRI sequence which is required to delineate a CSF fistula is	a	Greenberg 303
15	The best immunologic marker to differentiate CSF from nasal secretions in a case of suspected CSF rhinorrhoea	b	Sweet/Pg 134
