ERRATUM

Correction: *Piper nigrum* Oil – Determination of Selected Terpenes for Quality Evaluation

Planta Med 2018; 84. doi:10.1055/a-0782-0548

In the above-mentioned article, the last part of the abstract was corrected as follows:

Moreover, consistent enantiomeric ratios (\((-\) isomer/\((+\) isomer) of 92.2 ± 3.0% for \(\beta\)-pinene, 94.8 ± 2.8% for sabinene, 60.7 ± 1.1% for limonene, and 78.3 ± 1.3% for terpinen-4-ol were observed, independent of geographical location. These results demonstrate the potential of using stereospecific compositions as chiral signatures for establishing the authenticity and quality of black pepper oil.
