Heterocyclic sulfonyl chlorides, such as pyrimidine-2-sulfonyl chloride and benzimidazole-2-sulfonyl chloride are unstable at room temperature.¹⁻³ Pyrimidine-2-sulfonyl chloride rapidly decomposes to 2-chloropyrimidine² and, in the case of benzimidazole-2-sulfonyl chloride, byproducts are 2-chlorobenzimidazole and 2-hydroxybenzimidazole.³ Therefore, for entries 10 and 11 in Table 2 and entries 9 and 10 in Table 3, the yields quoted pertain to these byproducts and not to the corresponding sulfonyl chlorides.
