## Erratum

# An Improved Synthesis of 1,4,7-Triazacyclononanes (tacns) and 1,4,7,10-Tetraazacyclododecanes (cyclens) 

Jianying Huang, Zhongyuan Zhou, Tak Hang Chan* Synthesis 2009, 2341.

In the reaction of compound 7 with ethylenediamine (13) according to Scheme 4, it was reported that 1-tosyl-1,4,7triazacyclononane (9) was obtained in 78\% isolated yield. However, after being alerted by other laboratories, we repeated the same reaction under identical experimental conditions and did not obtain compound 9 as the product of the reaction. While the compound obtained was isomeric with 9 according to its mass spectrum, its ${ }^{1} \mathrm{H}$ NMR spectrum was similar but not identical to that of 9 , a known compound which could be obtained by an alternate route and independently synthesized according to Scheme $2 .{ }^{1}$ More significantly, the ${ }^{13} \mathrm{C}$ NMR spectrum of the obtained product has four aromatic and five aliphatic carbon signals and is distinctly different from that of 1-tosyl-1,4,7-triazacyclononane (9) which has eight carbon signals. The product is assigned to have the structure 1-( $2^{\prime}-$ aminoethyl)-4-tosylpiperazine (23) (revised Scheme 4). The formation of a six-membered ring is consistent with the reaction of 7 with $\mathrm{N}, \mathrm{N}$-dimethylethylenediamine (10) in giving 1-methyl-4-tosylpiperazine (11) as we had reported in Scheme 3.

Revised Scheme 4: Reaction of 7 with 13

We also re-examined the coupling of 7 with 1,4,7-triazaheptane (19) using potassium carbonate in refluxing acetonitrile (Scheme 7). The product obtained was found not to be 1-tosyl-1,4,7,10-tetraazacyclododecane (20), a known compound independently synthesized by an alter-
nate route. ${ }^{2}$ While the product was isomeric with $20 \mathrm{ac}-$ cording to its mass spectrum, its ${ }^{1} \mathrm{H}$ and ${ }^{13} \mathrm{C}$ NMR spectra were different from those of $\mathbf{2 0}$. The product is consistent with a piperazine structure $\mathbf{2 4}$, with four aromatic and six aliphatic carbon signals in its ${ }^{13} \mathrm{C}$ NMR spectrum (revised Scheme 7).

Revised Scheme 7: Reaction of 7 with 19

In conclusion, ethylenediamine (13) and 1,4,7-triazaheptane (19) did react with 7 but did not give the corresponding tacn 9 or cyclen 20.

1-(2'-Aminoethyl)-4-tosylpiperazine (23)
Compound $7(5.83 \mathrm{~g}, 10.0 \mathrm{mmol}), \mathrm{K}_{2} \mathrm{CO}_{3}(8.00 \mathrm{~g}, 58.0 \mathrm{mmol})$, ethylenediamine ( $0.60 \mathrm{~g}, 10.0 \mathrm{mmol}$ ) and anhydrous $\mathrm{MeCN}(50 \mathrm{~mL})$ were added to a round-bottom flask. The mixture was heated to reflux under an $\mathrm{N}_{2}$ atmosphere for 12 h . The mixture was cooled to r.t. and filtered. The filtrate was concentrated and the residue was purified by flash chromatography $\left(\mathrm{SiO}_{2}, \mathrm{CH}_{2} \mathrm{Cl}_{2}-\mathrm{MeOH}-\mathrm{Et}_{3} \mathrm{~N}=\right.$ 2:1:0.05 as eluent) to give 23 as a pale yellow oil ( $2.0 \mathrm{~g}, 78 \%$ ).
${ }^{1} \mathrm{H}$ NMR ( $400 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ): $\delta=7.63(\mathrm{~d}, J=7.4 \mathrm{~Hz}, 2 \mathrm{H}), 7.32(\mathrm{~d}$, $J=7.4 \mathrm{~Hz}, 2 \mathrm{H}), 3.01(\mathrm{br}, 4 \mathrm{H}), 2.73(\mathrm{t}, J=6.0 \mathrm{~Hz}, 2 \mathrm{H}), 2.52(\mathrm{brt}$, $4 \mathrm{H})$, 2.43-2.40 (m, 5 H$)$.
${ }^{13}$ C NMR (100 MHz, $\mathrm{CDCl}_{3}$ ): $\delta=143.7,132.4,129.6,127.8,60.2$, 52.2, 46.0, 38.4, 21.5.

LRMS (ESI): $m / z=284\left(\left[\mathrm{M}^{+}+\mathrm{H}\right], 100\right)$.
HRMS (ESI): calcd for $\mathrm{C}_{13} \mathrm{H}_{22} \mathrm{~N}_{3} \mathrm{O}_{2} \mathrm{~S}\left(\mathrm{M}^{+}+\mathrm{H}\right) ; 284.1433$; found: 284.1423.

## 1-(1', $\mathbf{4}^{\prime}$-Diazahexyl)-4-tosylpiperazine (24)

1,4,7-Triazaheptane ( $\mathbf{1 9}, 0.40 \mathrm{~g}, 4.00 \mathrm{mmol}$ ), compound $7(2.30 \mathrm{~g}$, $4.00 \mathrm{mmol}), \mathrm{K}_{2} \mathrm{CO}_{3}(6.00 \mathrm{~g}, 40.0 \mathrm{mmol})$ and anhydrous $\mathrm{MeCN}(20$ mL ) were added to a round-bottom flask. The mixture was heated to reflux under an $\mathrm{N}_{2}$ atmosphere for 18 h . The mixture was cooled to r.t. and filtered. The filtrate was concentrated and the residue was purified by chromatography $\left(\mathrm{SiO}_{2}, \mathrm{CH}_{2} \mathrm{Cl}_{2}-\mathrm{MeOH}=2: 1\right.$ as eluent $)$ to give a light yellow oil ( $1.2 \mathrm{~g}, 83 \%$ ).
${ }^{1} \mathrm{H}$ NMR ( $400 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ): $\delta=7.58(\mathrm{~d}, J=8.0 \mathrm{~Hz}, 2 \mathrm{H}), 7.27(\mathrm{~d}$, $J=8.0 \mathrm{~Hz}, 2 \mathrm{H}), 2.95(\mathrm{br}, 4 \mathrm{H}), 2.70(\mathrm{t}, J=6.0 \mathrm{~Hz}, 2 \mathrm{H}), 2.59(\mathrm{p}$, $J=6.0 \mathrm{~Hz}, 2 \mathrm{H}$ ), 2.47 (br t, 4 H ), $2.43(\mathrm{t}, J=6.0 \mathrm{~Hz}, 2 \mathrm{H}), 2.37(\mathrm{~s}, 3$ H).
${ }^{13} \mathrm{C}$ NMR ( $100 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ): $\delta=143.7,132.4,129.6,127.8,57.4$, 52.3, 52.2, 46.1, 46.0, 41.4, 21.5.

LRMS (ESI): $m / z=327\left(\left[\mathrm{M}^{+}+\mathrm{H}\right], 100\right), 349\left(\left[\mathrm{M}^{+}+\mathrm{Na}\right], 29\right)$.
HRMS (ESI): calcd for $\mathrm{C}_{15} \mathrm{H}_{27} \mathrm{~N}_{4} \mathrm{O}_{2} \mathrm{~S}\left[\mathrm{M}^{+}+\mathrm{H}\right]: 327.1855$; found: 327.1856.

## Acknowledgment

We gratefully acknowledge the help of Dr. Kin-Fai Chan for repeating the experiments.
