Y. YANG, T. J. L. MUSTARD, P. H.-Y. CHEONG,* S. L. BUCHWALD* (MASSACHUSETTS INSTITUTE OF TECHNOLOGY, CAMBRIDGE AND OREGON STATE UNIVERSITY, CORVALLIS, USA)

Palladium-Catalyzed Completely Linear-Selective Negishi Cross-Coupling of Allylzinc Halides with Aryl and Vinyl Electrophiles

**Palladium-Catalyzed Linear-Selective Negishi Cross-Coupling of Allylzinc Halides**

**Significance:** Cheong, Buchwald, and co-workers report the first completely linear-selective palladium-catalyzed Negishi cross-coupling of various 3,3-disubstituted allylzinc reagents with (hetero)aryl and (pseudo)halides, leading to prenylated (hetero)aryl and alkenyl compounds in high yield and with excellent regioselectivity.

**Comment:** Apart from (hetero)aryl and vinyl bromides and chlorides, nonaflates and triflates were successfully used in this protocol. Computational studies reveal that an $\eta^1$-$\alpha$ reductive elimination is preferred due to energetic reasons, leading exclusively to the prenylated products. Thus, the choice of catalyst and transmetalation reagent is crucial.

**Selected examples:**

- 78% yield, $\alpha/\gamma > 99:1$
  - X = Br, Y = Br

- 93% yield, $\alpha/\gamma > 99:1$
  - X = Br, Y = Br

- 95% yield, $\alpha/\gamma > 99:1$
  - X = Br, Y = Br

- 94% yield, $\alpha/\gamma > 99:1$
  - X = Br, Y = Br

- 90% yield, $\alpha/\gamma > 99:1$
  - X = OTf, Y = Br

- 92% yield, $\alpha/\gamma > 99:1$
  - X = OTf, Y = Br

- 92% yield, $\alpha/\gamma > 99:1$
  - X = ONf, Y = Br

- 75% yield, $\alpha/\gamma > 99:1$
  - X = OTf, Y = OP(O)(OEt)$_2$
