1.5 Citation
The German Guideline Programme in Oncology (German Cancer Society, German Cancer Aid, AWMF): S3-Guideline on Diagnostics, Therapy and Follow-up of Malignant Ovarian Tumors, short version 1.0 (2013), AWMF registration number: 032–035OL, http://leitlinienprogramm-onkologie.de/Leitlinien.7.0.html

1.6 Note
Medicine is continually subject to a process of development and change so that all information, particularly all information on diagnostic and therapeutic treatments, can only reproduce the state of knowledge at the time of printing of this guideline on care. The greatest possible care was taken when compiling these recommendations on therapy and the choice and dosage of medications. Users are requested to consult the package leaflets and check the summary of product characteristics provided by manufacturers and, when in doubt, to consult a specialist. In the interests of all concerned, please contact the OL editorial office if you find discrepancies or controversial issues.

Users are responsible for all diagnostic and therapeutic applications, medications and dosages.

Registered trademarks (brand names) mentioned in this guideline have not been specifically labelled. When a specific indication lacks a trade name it should not be concluded that the brand name has not been registered. This guideline and all of its constituent parts is protected under copyright law. Any utilisation contrary to the provisions of copyright law without the written permission of the OL editorial office is prohibited and liable to prosecution. No part of this guideline may be reproduced in any form without the written permission of the OL editorial office. This applies in particular to copies, translations, microfilms and all storage, utilization and processing in electronic systems, intranets and the internet.

1.7 Additional guideline documents

The contents of this short version refer to the long version of the S3-Guideline on Diagnostics, Therapy and Follow-up of Malignant Ovarian Tumours available in German on the following websites:

- AWMF (http://www.awmf.org/leitlinien/aktuelle-leitlinien.html)
- German Guideline Programme in Oncology http://www.leitlinienprogramm-onkologie.de/OL/leitlinien.html
- German Cancer Society http://www.krebssgesellschaft.de/wub_llevidenzbasiert,120884.html
- German Cancer Aid (http://www.krebshilfe.de/)
- Guidelines International Network (www.g-i-n.net)
- Contributing German scientific medical societies (e.g. http://www.dggg.de/leitlinien/)

In addition to the short version, a number of other, supplementary documents are also available:

- Guideline report on the compilation of the guideline
- Long version
- Patient guideline

All of these documents will also be available on the websites listed above.

1.8 Responsibilities

1.8.1 Authors of the guideline

Editorial team

- Prof. Dr. Uwe Wagner (Co-ordinator, DGGG), Uni-Frauenklinik, Baldingerstraße, 35043 Marburg, Germany
- Dr. Philipp Harter (DGGG), Kliniken Essen-Mitte, Henricistraße 92, 45 136 Essen, Germany
- PD Dr. Felix Hilpert (DGGG), Universitätsklinikum Schleswig Holstein, Campus Kiel, Klinik für Gynäkologie und Geburtshilfe, Arnold-Heller-Straße 3, Haus 24, 24105 Kiel, Germany
- PD Dr. Sven Mahner (DGGG), Universitätsklinikum Hamburg-Eppendorf, Klinik für Gynäkologie, Martinistraße 52, 20246 Hamburg, Germany

- Prof. Dr. Daniel Fink – Schweizerische Gesellschaft für Gynaekologie und Geburtshilfe (SGGG) [Swiss Society for Gynaecology and Obstetrics]
- Dr. Alexander Burges – as an independent expert
- Prof. Dr. Annette Hasenburg – as an independent expert
- Dr. C. Eggert from the Medizinischen Dienst der Krankenversicherung in Hessen (MDK Hessen) [Medical Service of the Health Insurance Companies in Hesse] contributed to the discussions at the Consensus Conferences as an expert without voting rights.

Methodological Support

1. The German Guideline Programme on Oncology
- Prof. Dr. Ina Kopp, Marburg (AWMF)
- Dr. Markus Follmann MPH MSc, Berlin (DKG) [German Cancer Society]
- Dipl.-Soz.Wiss Thomas Langer (DKG) [German Cancer Society]
2 Introduction

2.1 Target audience

The guideline was compiled with the aim of providing high-risk groups with advice on diagnostics, surgical and systemic therapy in early and advanced stages of disease together with the treatment of rare histological subtypes. A lot of emphasis has been placed on follow-up care, rehabilitation, palliative therapy and psycho-oncological counselling. The recommendations are for physicians working both in hospitals and outpatient clinics, nursing staff and other medical partners involved in treating patients with malignant ovarian tumours. As it also covers the topics ‘Screening’ and ‘Follow-up’, registered physicians working in their own practice are also an important target audience of this guideline. It is additionally intended to offer guidance to affected patients and persons seeking more information as well as providing a basis for the gynaecological cancer centres currently being set up in Germany. 

For the first time, scientific medical societies in Switzerland and Austria were also consulted, expanding the scope of this guideline.

2.2 Methodology

The methodological approach used to compile the guideline has been described in the guideline report. The guideline report is freely available online (in German), for example on the website of the German Guideline Programme in Oncology (http://leitlinienprogramm-onkologie.de/Leitlinien.7.0.html) and the pages of the AWMF (http://www.awmf.org/).

2.2.1 SIGN level of evidence system

To classify the risk of bias or confounding in the identified studies, this guideline has used the level of evidence system of the Scottish Intercollegiate Guidelines Network (SIGN, Version 2009) (http://www.sign.ac.uk/pdf/sign50.pdf) as described in Table 1 below.

<table>
<thead>
<tr>
<th>Level</th>
<th>Description</th>
<th>Syntax</th>
</tr>
</thead>
<tbody>
<tr>
<td>1++</td>
<td>High quality meta-analyses, systematic reviews of randomised controlled trials (RCTs), or RCTs with a very low risk of bias</td>
<td>must/necessary</td>
</tr>
<tr>
<td>1+</td>
<td>Well conducted meta-analyses, systematic reviews of RCTs, or RCTs with a low risk of bias</td>
<td>should</td>
</tr>
<tr>
<td>1−</td>
<td>Meta-analyses, systematic reviews of RCTs, or RCTs with a high risk of bias</td>
<td>can</td>
</tr>
<tr>
<td>2++</td>
<td>High quality systematic reviews of case-control or cohort studies, or high quality case control or cohort studies with a very low risk of confounding or bias (“chance”) and a high probability that the relationship is causal</td>
<td>must/necessary</td>
</tr>
<tr>
<td>2+</td>
<td>Well conducted case-control or cohort studies with a low risk of of confounding or bias (“chance”) and a moderate probability that the relationship is causal</td>
<td>should</td>
</tr>
<tr>
<td>2−</td>
<td>Case-control or cohort studies with a high risk of confounding or bias (“chance”) and a significant risk that the relationship is not causal</td>
<td>can</td>
</tr>
<tr>
<td>3</td>
<td>Non-analytic studies, e.g. case reports, case series</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>Expert opinion</td>
<td></td>
</tr>
</tbody>
</table>

2.2.2 System of grading recommendations

The OL methodology uses the grades of recommendation awarded by the authors of the guideline. The level of recommendation is decided on in a formal consensus process, using a multi-step nominal group technique moderated by the AWMF.

The guideline includes the level of evidence (SIGN, see 2.2.1) of the studies on which they are based as well as the strength of the recommendation (grade of recommendation) for all evidence-based statements (see chapter 2.2.3) and recommendations. This guideline has three different ‘strength of recommendation’ ratings (see Table 2 below), which are also reflected in the formulation of the recommendation.

<table>
<thead>
<tr>
<th>Grade of recommendation</th>
<th>Description</th>
<th>Syntax</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>strongly recommended</td>
<td>must/necessary</td>
</tr>
<tr>
<td>B</td>
<td>recommended</td>
<td>should</td>
</tr>
<tr>
<td>0</td>
<td>neither recommended nor recommended</td>
<td>can</td>
</tr>
</tbody>
</table>

2.2.3 Statements

Statements are expositions or explanations of specific facts or issues which do not constitute a call for action. They are approved in a similar manner to that used for recommendations in a formal consensus process and may be based either on study results or expert opinions.

2.2.4 Clinical consensus (CC)

Statements/recommendations which were drawn up on the basis of a consensus of experts from the guideline group are identified by the term “clinical consensus”. No symbols were used to grade the clinical consensus; the strength of the consensus is indicated by the formulations used (must, necessary/should/can) as described for the gradations in Table 2.

2.2.5 Independence and disclosure of possible conflicts of interest

German Cancer Aid provided the funding through the German Guideline Programme in Oncology (OL). Funds were used for staffing costs, office materials, literature and consensus conferences (costs of venue, the media technology required at conferences, catering, moderator’s fees, travelling expenses of participants). Travelling expenses were reimbursed in accordance with the German law on travel expenses when on company business or according to standard practice for the DKG [German Hospital Federation]. Editorial decisions and the compilation of the guideline were carried out entirely independent of the funding organisation. During the guideline process, all members provided a written disclosure of possible conflicts of interest. The conflicts...
of interest disclosed are included in the guideline report to this guideline (http://leitlinienprogramm-onkologie.de/Leitlinien.7.0.html). We would like to take this opportunity of thanking all contributors for their contribution to the project, which was entirely voluntary and unsalaried.

2.2.6 Period of validity and update process
This S3-guideline will remain valid until it is next updated; its estimated period of validity is 3 years. Regular updates are planned; if an urgent need for changes to the guideline occurs in between update times, these changes will be published separately. Comments and advice for the update process are expressly requested and should be sent to the following address:
Prof. Dr. Uwe Wagner, Klinik für Gynäkologie, gynäkologische Endokrinologie und Onkologie, Baldingerstraße, D-35043 Marburg, Germany; phone: 06421–58–66211, fax: 0642158–68969, e-mail: wagneru@med.uni-marburg.de.

</thead>
<tbody>
<tr>
<td>3.6</td>
<td>Further examinations should be initiated if the following symptoms occur repeatedly and persistently, particularly in women above the age of 50: Bloating, Flatulence, Vague abdominal pain or discomfort, Increased frequency of micturition</td>
<td>CC</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3.7</td>
<td>If there is a suspicion of an ovarian mass, pelvic examination (palpation, speculum) must be carried out, followed by transvaginal sonography.</td>
<td>CC</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3.8</td>
<td>No diagnostic examination exists which can take the place of operative staging for ovarian cancer and give a reliable assessment of the tumour’s operability.</td>
<td>CC</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3.3 Diagnosis of recurrence

<table>
<thead>
<tr>
<th>No.</th>
<th>Recommendations</th>
<th>GR</th>
<th>LoE</th>
<th>Sources</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.9</td>
<td>Asymptomatic patients: If, contrary to the recommendations of the guideline, there is a suspicion of recurrence based on increased CA-125 levels, the further procedure should be discussed with the individual patient. An early, pre-symptomatic start of treatment for recurrence is not associated with improved survival rates.</td>
<td>B</td>
<td>1+</td>
<td>Primary studies: [14]</td>
</tr>
<tr>
<td>3.10</td>
<td>Symptomatic patients: If symptoms are present, additional diagnostic investigations can be initiated. We were unable to identify evidence which would indicate improved survival for any of the available procedures.</td>
<td>0</td>
<td>2+</td>
<td>Primary studies: [15–23]</td>
</tr>
</tbody>
</table>
4 Patient Consent and Information

<table>
<thead>
<tr>
<th>No.</th>
<th>Statements</th>
<th>GR</th>
<th>LoE</th>
<th>Sources</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.1</td>
<td>The information provided by the physician to the patient must include information on the disease, the results of the examination(s), the course of treatment to date, the diagnostic and therapeutic options including expected side-effects as well as the assessment of the associated prognosis and the impact on the patient’s life plans and quality of life. Written materials and other suitable media can be used to help explain all of this to the patient and as aids in decision-making.</td>
<td>CC</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| 4.2 | Conveying this information and explaining it to the patient must be done based on the following principles of patient-centred communication:  
  - The physician must show empathy and use active listening  
  - Difficult topics must be touched upon directly and sensitively  
  - Avoid using specialised medical vocabulary; explain specialist terminology where necessary  
  - Use strategies to improve the patient’s comprehension (repetition, summarising of important information, use of diagrams and graphs)  
  - Encourage the patient to ask questions  
  - Permit and encourage the patient to express her feelings, particularly her worries and fears  
  - Offer further help | CC |     |                                  |
| 4.3 | The patient’s wishes about being involved in the process of medical decision-making must be taken into account. | CC |     |                                  |

<td></td>
<td>- Bilateral pelvic and paraaortal lymphonodectomy</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

7.2 If ovarian cancer is unexpectedly diagnosed, this must be confirmed histologically and the extent of spread described. The definitive treatment must then be carried out by a gynaecological oncologist.

7.3 In patients with unilateral FIGO I stage tumours, fertility-preserving surgery can be done if staging was adequate.

7.4 Patients with early stage ovarian cancer must be informed about the increased risk associated with fertility-preserving treatment, a risk which also depends on additional prognostic factors.

7.5 Laparoscopic staging must not be done outside of studies.

7.1. Optimal staging must include the following surgical steps:

7.2 Surgical treatment of advanced ovarian cancer

<table>
