**Oxidative Amination of the Zinc Bromide Complex of β-Enamino Esters**

**Significance:** Lee and co-workers report a tandem palladium-catalyzed intramolecular oxidative olefin amination of the zinc bromide complex of α-vinylated β-amino esters to afford various 2,3,4-trisubstituted pyroles in good yields.

**Comment:** The synthetic utility of this efficient and atom-economic procedure is shown by the synthesis of pyrrolophenanthrenes and pyranopyrroles through selective palladium- and copper-catalyzed C–C and C–O bond-forming reactions.
