1,3-Dicyclohexylimidazole-2-ylidene as a Superior Ligand for the Nickel-Catalyzed Cross-Coupling of Aryl and Benzyl Methyl Ethers with Organoboron Reagents

**Nickel-Catalyzed Suzuki–Miyaura Cross-Coupling**

![Chemical Reaction Diagram]

**Significance:** The authors developed a novel nickel-based catalyst for the cross-coupling of aryl and benzyl methyl ethers with organoboron reagents. The use of Ni(cod)$_2$ and 1,3-dicyclohexylimidazol-2-ylidene (A) gave the expected products in good yields while showing good functional group tolerance.

**Comment:** Notably, when using A instead of Cy$_3$P, heteroaryl ethers were coupled in good yields (up to 96%), while the same reaction with Cy$_3$P led to no product.

**Selected examples:**

- 76% yield
- 81% yield
- 74% yield

**Category:** Metal-Mediated Synthesis

**Key words:** nickel, Suzuki–Miyaura cross-coupling
