Welcome to the beginning of yet another year with *Seminars in Thrombosis & Hemostasis* (STH). This is my 9th year as Editor-in-Chief, and my 12th year of editorial association with this journal, having originally served as a regional editor. First, as always, I wish to sincerely thank all the contributors to STH over past years, as well as the guest editors for these past issues, and of course the current and past senior and associate editors of the journal. There have been no new changes to the editorial team. We remain with four senior editors: Marcel Levi and Ton Lisman are European-based Senior Editors, and Hau Kwaan and Sam Schulman are North America–based Senior Editors. We also increased the ranks of associate editors last year, with the aim to have around 10 to 12 editors contributing from each of the “global regions” of America, Europe, and Asia Pacific. This set of editors will remain active in 2017.

I will also take this opportunity to thank the journal production team at Thieme Medical Publishers for their high production standards and for facilitating both the print and online issues of the journal. In particular, I would like to thank Subhankar De, the project manager for STH, who manages the production process of STH and articles. I also wish to thank other key people at Thieme, who prefer to remain unnamed, for additional support provided over the recent years.

This is also the time that we reflect on our journal’s Impact Factor, which for 2015 was 3.505, which represents a small fall from our 2014 Impact Factor of 3.876 (Fig. 1). I am hopeful that this reflects a stabilization of the STH Impact Factor at around 4 over coming years. I also assessed the trends for Impact Factor changes for 2015 versus 2014 for STH in comparison with other thrombosis and hemostasis-focused journals from 2014 to 2015.

![Fig. 1](image1.png) The Impact Factor for *Seminars in Thrombosis & Hemostasis*, from 2003 to 2015.

![Fig. 2](image2.png) Changes in the Impact Factor for *Seminars in Thrombosis & Hemostasis* as well as other Thrombosis and Hemostasis focused journals from 2014 to 2015.

ISSN 0094-6176.
focused journals, and these showed a generalized fall in all but a single journal (Fig. 2). In any case, the Impact Factor is not the only marker of journal’s “quality” that we should consider, given the existence of other biometric markers and the limitations of any individual marker (including the Impact Factor) as a “quality” indicator.1,2

As I also do annually now, the highest cited (2013/2014-published) contributions3–22 from this journal are listed in Table 1 for the potential interest of the readership and contributing authors. These contributions identify those publications most contributing to the 2015 Impact Factor, and each have now been cited eight or more times in literature. For those interested, the current listing can be compared with those of the most recently published top downloaded article listings from Seminars in Thrombosis & Hemostasis, the basis of the Eberhard F. Mammen “Most Popular” awards.23,24 Accordingly, I would like to thank all the contributors, guest editors, and the editorial team for bringing us the content that makes Seminars in Thrombosis & Hemostasis.

Finally, a short note to confirm that, as always, we will continue to develop plans for the future content of this journal, and we are confident that we will be able to continue to bring its readers the high-quality journal that is expected of us. Currently confirmed topics for issues that we plan to publish over the next 12 or so months are listed in Table 2. At the same time, we recognize the need to retain some flexibility in our plans, and to potentially add additional material of current interest and controversy as the need arises. We look forward to another interesting year of reading in 2017.

*Thus contributing most to the 2015 Impact Factor.
Table 2 Current planned topics for future issues of Seminars in Thrombosis & Hemostasis

- Editorial compilations (continuing series)
- Thrombosis and hemostasis in surgery
- Laboratory assessment and monitoring of therapy in thrombosis and bleeding disorders
- Fibrinolysis
- Antiphospholipid antibodies and the antiphospholipid syndrome
- Recent advances in thrombosis and hemostasis (continuing series)
- Clinical scoring systems in thrombosis and hemostasis
- Point of care testing in acute hemorrhagic and thrombotic states
- Extrahemostatic functions of platelets/coagulation
